Founded in **1992** by **M. Kemal Coşkunöz**, **COPA Isı Sistemleri** is one of the largest capacity steel panel radiator manufacturers in Turkey and has been a leading exporter for more than 25 years. COPA manufactures HVAC products with 100 % Turkish capital in its modern 26,000 square meter production facility located in Bursa Minareliçavuş Organised Industrial Zone. It operates with its distributors in more than 40 countries in 4 continents with HVAC products such as heat pumps, wall hung boilers, air conditioners, water heaters, panel radiators, towel radiators, room thermostats, radiator valves and accessories.

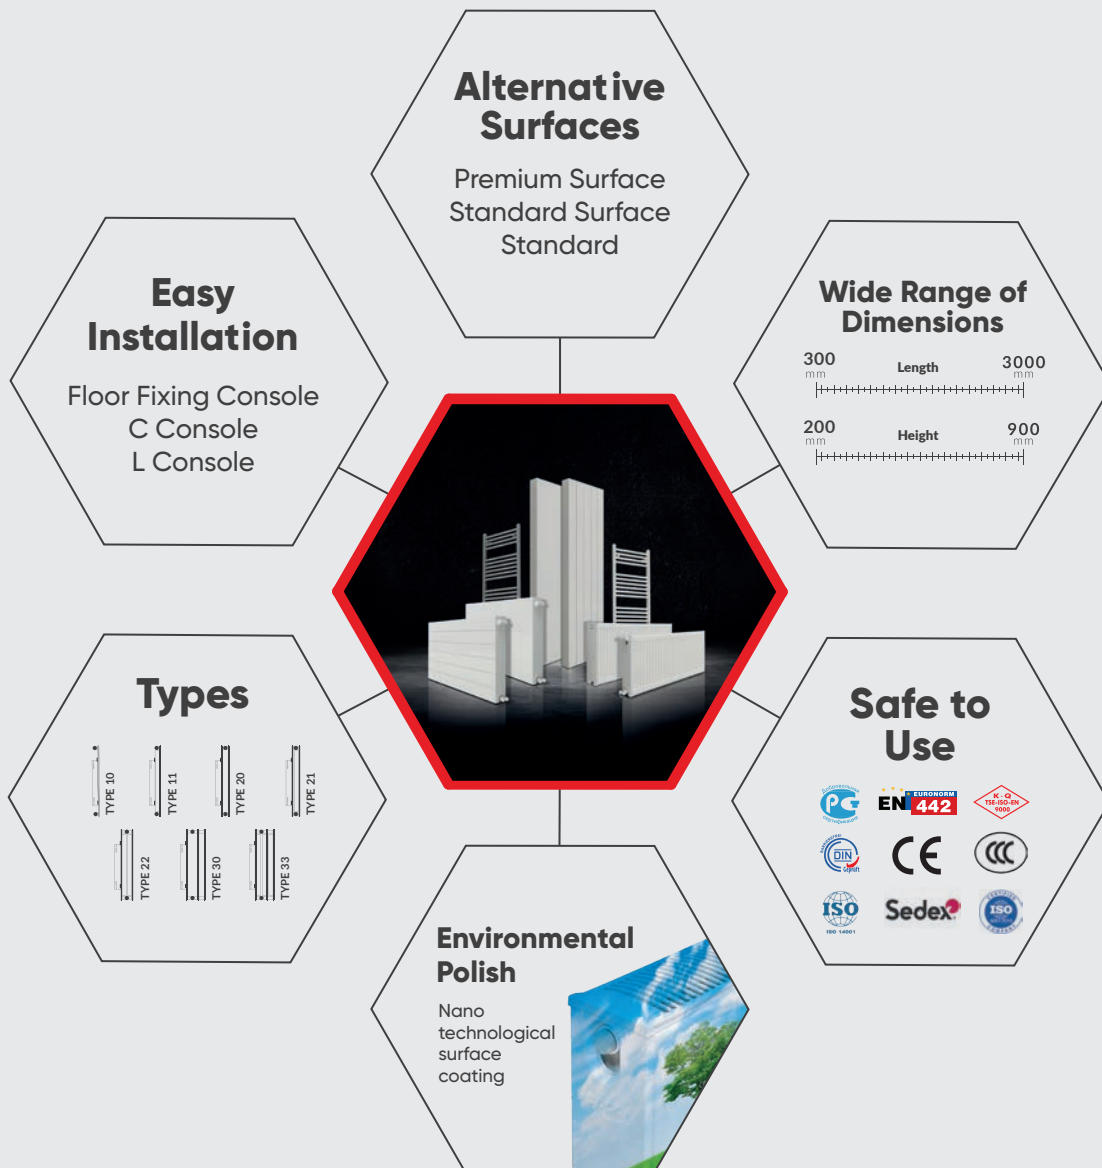

COPA products are produced by using the latest technology and fully automated process stages. With our know-how, minimum error, maximum productivity principle is applied in all our production activities. All COPA products which are in compliance with international quality standards are suitable for stocking with special packages that protect against impacts.

SAFE TO USE

COPA radiators, which have international certifications, are subject to quality control procedures at every stage of production and guaranteed for 10 years.

EASY OF INSTALLATION

COPA radiators with special accessories and COPA packages can be easily installed in any venue with C console, L console and floor fixing console.

WIDE RANGE OF DIMENSIONS, SUITABLE TO ALL NEEDS

COPA radiators are produced in different types, heights and lengths and provide an effective appearance with suitable options for all kinds of places.

ENVIRONMENTAL AND LONG-LIFE

Before coated with high quality epoxy polyester powder paint (RAL 9016), COPA radiators are painted with water-based epoxy polyester after surface treatment process and are re-cured.

In this way, all COPA radiators become more resistant to weather conditions, chemical effects, impacts and corrosion.

Bring Out the 'Aesthetic' to Your Standards

Innova Radiators

Innova Radiators with curved top grill and side covers, thanks to its innovative design, it produces both high thermal power and an aesthetic appearance.

Innova Radiators, developed by providing an elegant appearance to standard Radiators, ensure maximum efficiency and heat comfort.

Horizontal Decorative Radiators

Standard

**Modern
Look**

Premium

Horizontal Decorative Radiators, which warm the environment in a short time by minimizing the output loss, provide maximum savings. Horizontal Decorative Radiators, transmits most of the heat through its convectors therefore the flat surface on the front side has a gentle heat that doesn't give the feeling of high heat on the radiator's surface when touched. This enables Horizontal Decorative Radiators, to be working in schools, hospitals and nurseries in safe and comfort. In addition to high thermal efficiency it has standard and premium flat surface alternatives.

Technical Specifications	
Type	11, 21, 22
